WHAT RECITATION SECTION ARE YOU IN?

Closed book, closed notes, no calculators/PDAs; no reference materials of any kind. Turn off all handheld devices, including cell phones.

Show work; a correct answer, by itself, may be insufficient for credit. Arithmetic need not be simplified, unless the problem requests it.

I understand the above, and I understand that cheating has severe consequences, from a failing grade to expulsion.

III. Computations. Show work. Unless otherwise specified, answers must be exactly correct, but can be left in any form easily calculated on a standard calculator.

1. (10 pts) Compute

$$
\frac{d}{d x}\left[\frac{\left(x^{2}+3 x\right)(\sin x)}{1+e^{x}}\right]
$$

2. ( 15 pts ) Compute $\lim _{n \rightarrow \infty}\left(1+\frac{0.045}{n}\right)^{n}$.
3. (10 pts) Find all horizontal asymptotes to

$$
y=\frac{\sqrt{9 x^{2}+2 x+5}}{2 x-3}
$$

(NOTE: A horizontal asymptote is a line; your answers should be equations of lines, NOT numbers.)
4. ( 10 pts ) Suppose $f(0)=2$ and $f^{\prime}(0)=3$. Suppose $g(0)=4$ and $g^{\prime}(0)=5$. Let $h=f g$. Compute $h(0)$ and $h^{\prime}(0)$.
