Corrections to

Olver, P.J., Moving frames and singularities of prolonged group actions, *Selecta Math.* **6** (2000), 41–77 .

There are multiple typos in Example 3.3. The corrected version can be found at

`http://www.math.umn.edu/∼olver/mf_/smf.pdf`

In particular, the statement that a fifth order moving frame cannot be algebraically computed is false. See

`http://www.math.umn.edu/∼olver/mf_/sa2.pdf`

for the explicit calculation of such a higher order moving frame.

Thanks to Zhangchi Chen for correspondence on these corrections.
